***Priority***

It is noted that in addition to the applications recited in the Cross Reference to Related Applications section of the specification there are numerous other co-pending applications which disclose and claim very similar and/or identical subject matter. In accordance with MPEP 704.11(a) subsection G, applicant is respectfully requested to disclose all of the co-pending applications, particularly those which contain claims drawn to similar/identical subject matter.

***Restriction***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 61-68, drawn to a method of ablating cardiac tissue, classified in class 128, subclass 898.
- II. Claims 70-73, drawn to an ablation device including a flexible membrane, classified in class 606, subclass 41.
- III. Claims 74-81, drawn to an ablation device and controller, classified in class 606, subclass 034.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as for use to ablate uterine tissue without a controller to regulate the specific timing of the frequency. See MPEP § 806.05(d).

Art Unit: 3739

Inventions I and Inventions II and III are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the devices may be used to treat tissue other than cardiac tissue, such as uterine tissue.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

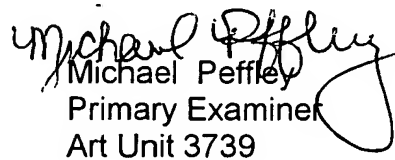

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael Peffley whose telephone number is (703) 308-4305. The examiner can normally be reached on Mon-Fri from 6am-3pm.
